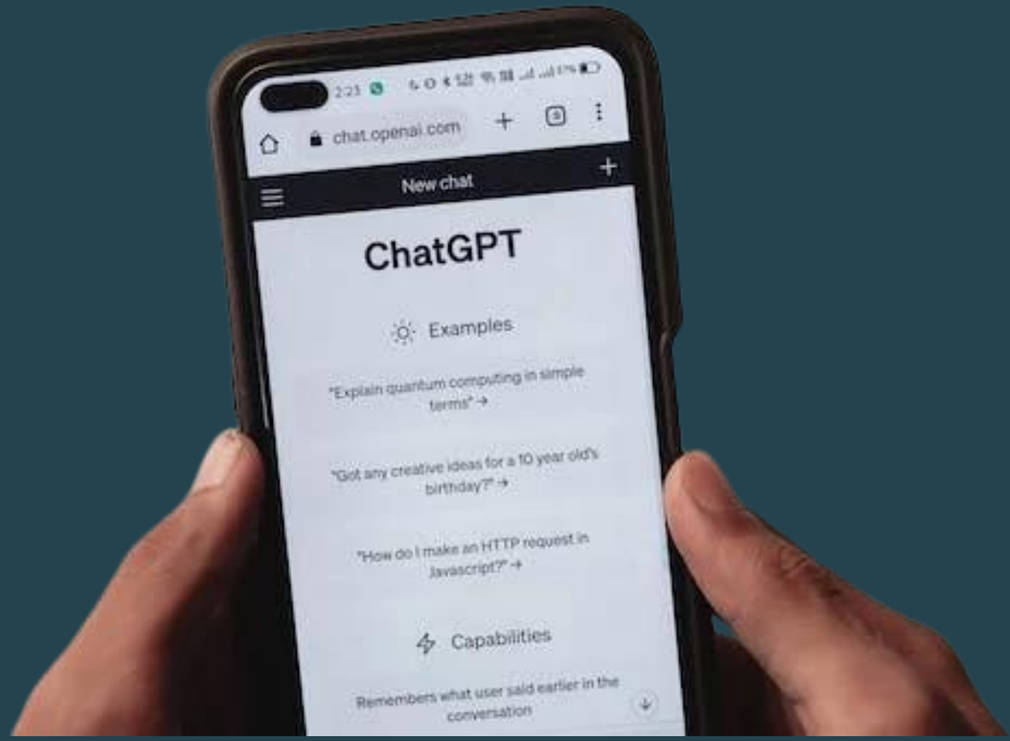
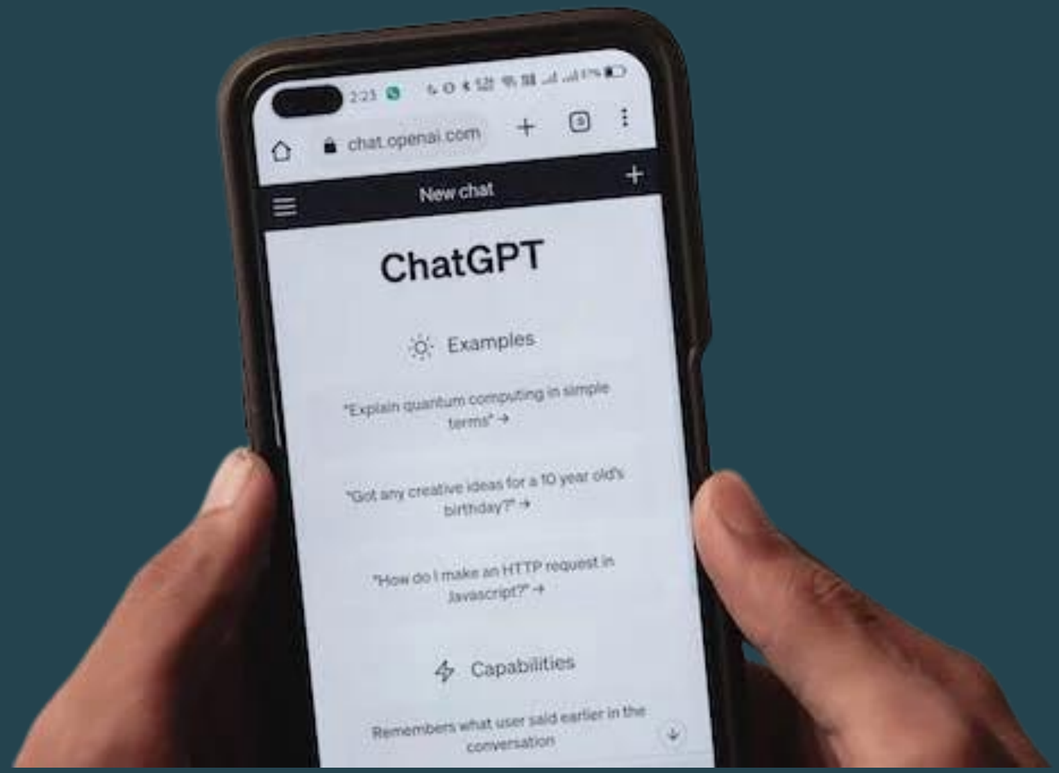
What is AI ?

Artificial Intelligence (AI) is a technology that helps computers to think and learn like humans. It is like a brain for computers that can help them to do things that normally only humans can do, such as recognizing faces, playing games, and even driving cars. AI is used in many things we use every day, like smartphones, video games, and even some toys. It is a very exciting field that is growing fast and has the potential to change the world in many ways!

ChatGPT is a chatbot that can have conversations by generating responses that sound human. It has been trained on tons of text data to learn patterns about how we use language. When you give it a prompt, it predicts the next word that should come in the response by looking at the words you used and the patterns it has learned. So, it can come up with responses that make sense based on what you typed.



The technology behind it is complex, using neural networks which are inspired by the human brain. But basically, it has been shown lots of examples of conversations so it can imitate that. It's pretty good at responding sensibly on common topics but can get confused about obscure stuff it hasn't seen examples of before. The key is it doesn't actually understand language or have real thoughts - it just uses statistics to guess the next word that would sound reasonable to continue the conversation.



An AI search and a Google search are different ways of finding information on the internet. An AI search can talk to you like a friend and give you answers using its own words. It can also learn from your preferences and past searches to give you more personalized results.

A Google search can show you a list of websites, images, or news articles that are related to what you type in the search box. It can also give you snippets of information from different sources, but it cannot write its own answers. An AI search is more interactive and creative, while a Google search is more informative and comprehensive.

1950 World Series, New York Yankees vs. Philadelphia Phillies
americanhistory.si · 3

View 5 more

Answer

The 1950 World Series was won by the New York Yankees, who defeated the Philadelphia Phillies in a four-game sweep, clinching the championship on October 7, 1950. This victory marked the Yankees' 13th World Series title and their second consecutive championship, as they had also won in 1949 [3] [5].

The series featured the following results:

- **Game 1:** Yankees 1, Phillies 0
- **Game 2:** Yankees 2, Phillies 1 (10 innings)
- **Game 3:** Yankees 3, Phillies 2
- **Game 4:** Yankees 5, Phillies 2

Key performances included strong pitching from Yankees' starters Vic Raschi, Allie Reynolds, and Whitey Ford, with Ford earning the win in the final game [1] [5] [7].

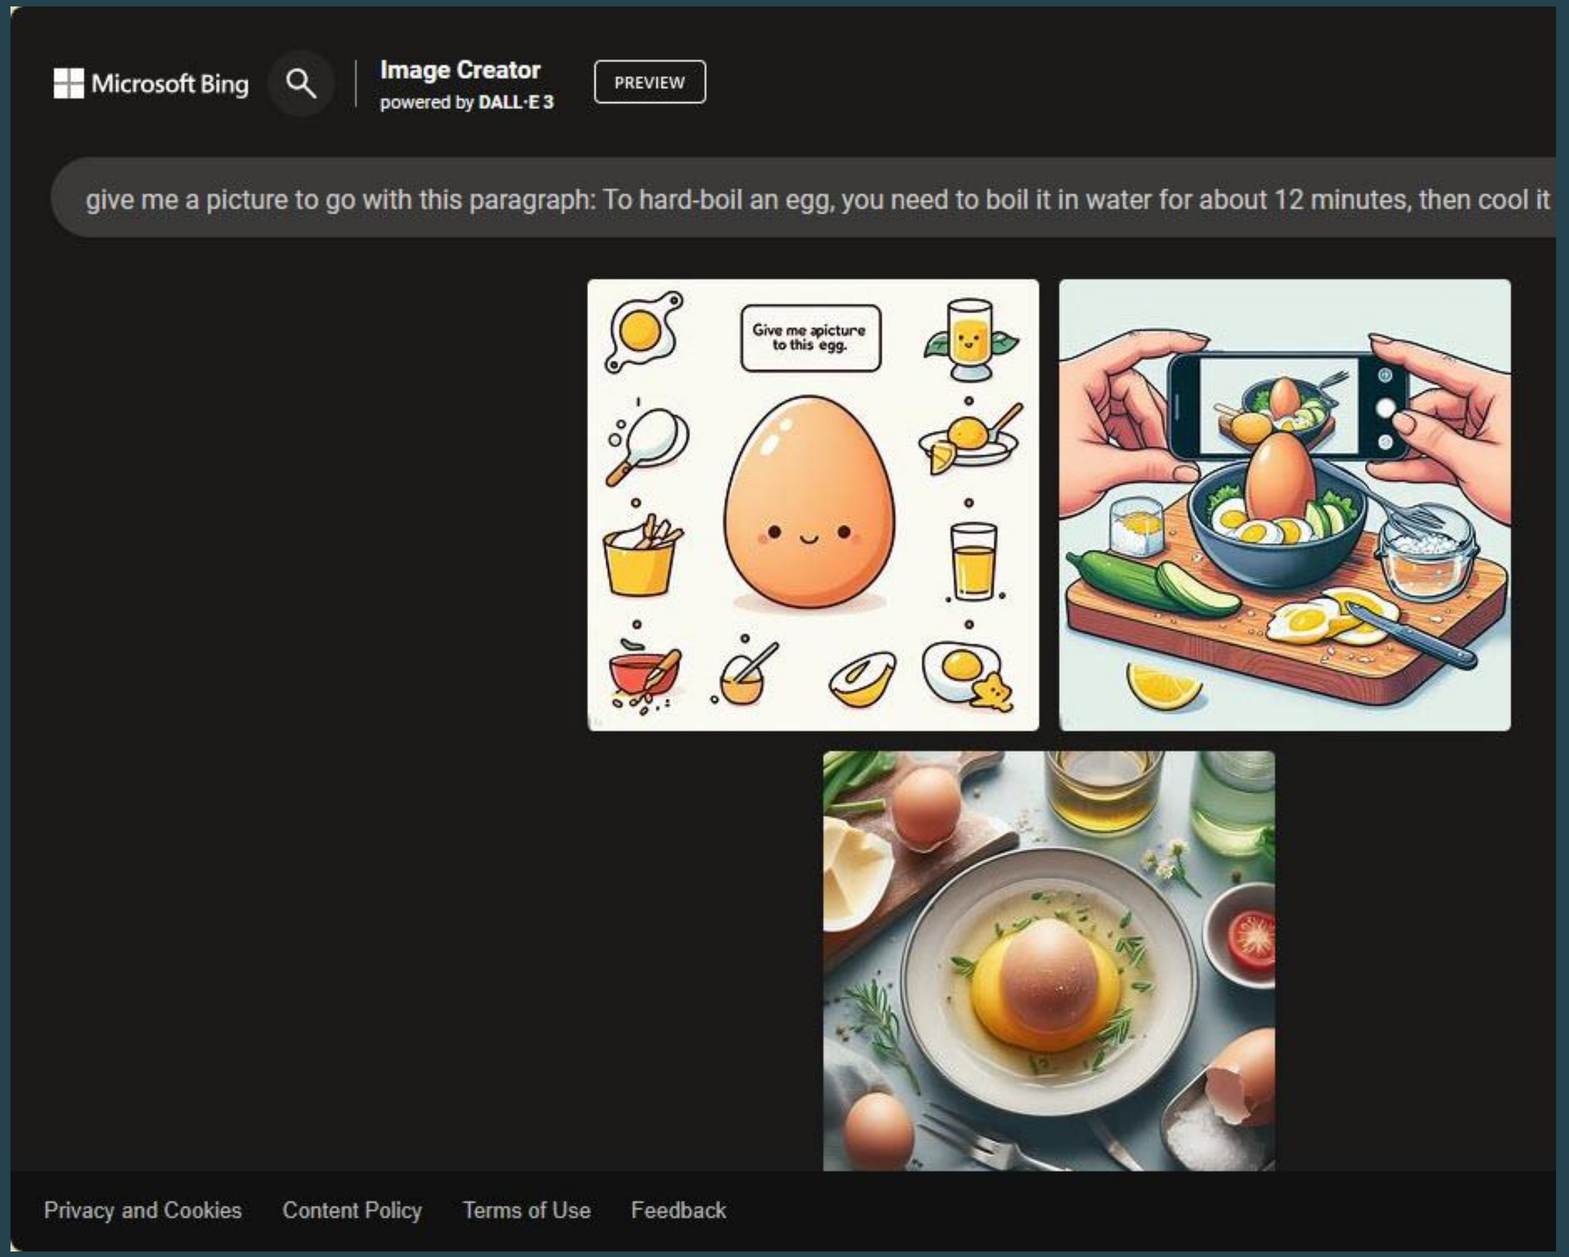
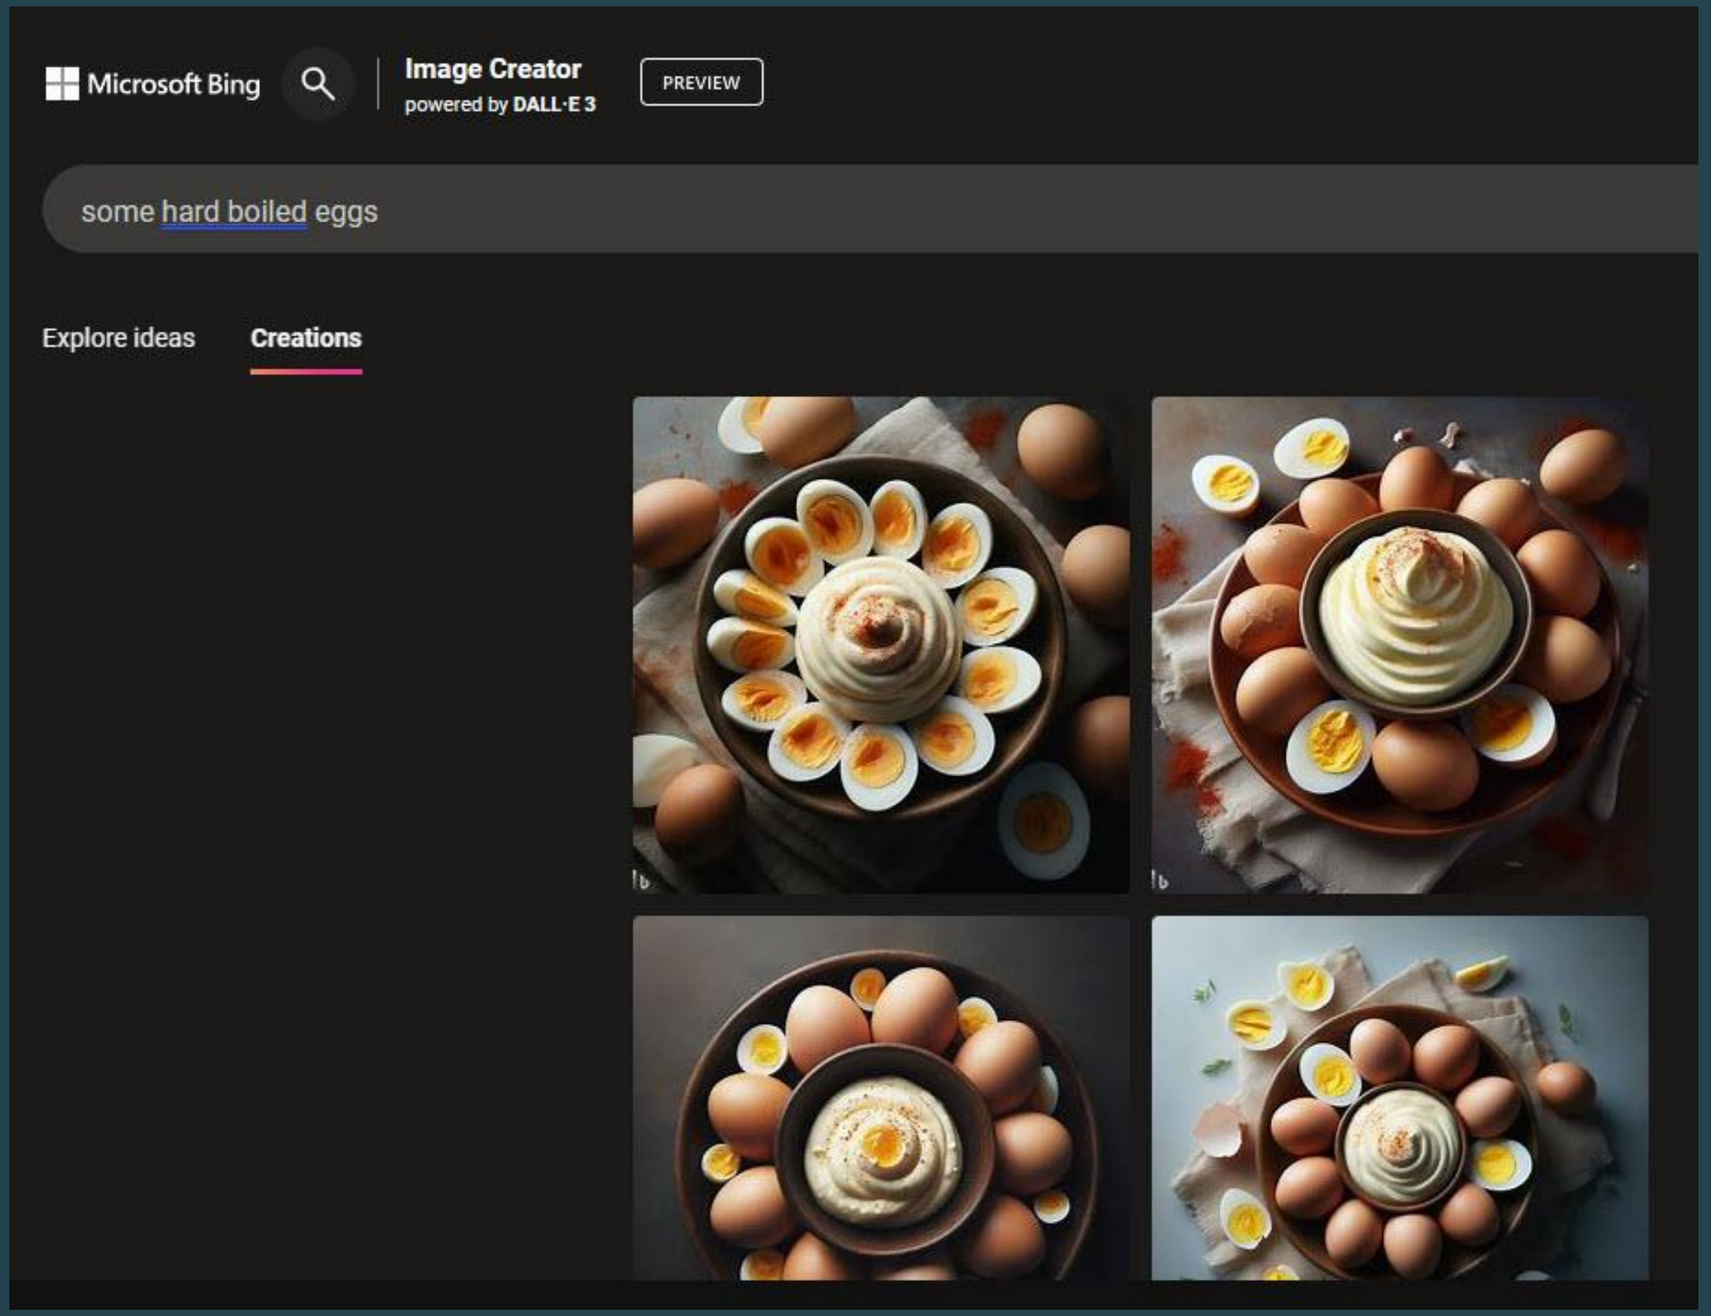
Using Microsoft Bing Image Creator, I asked it to give me a picture using the same paragraph. Here are the results.

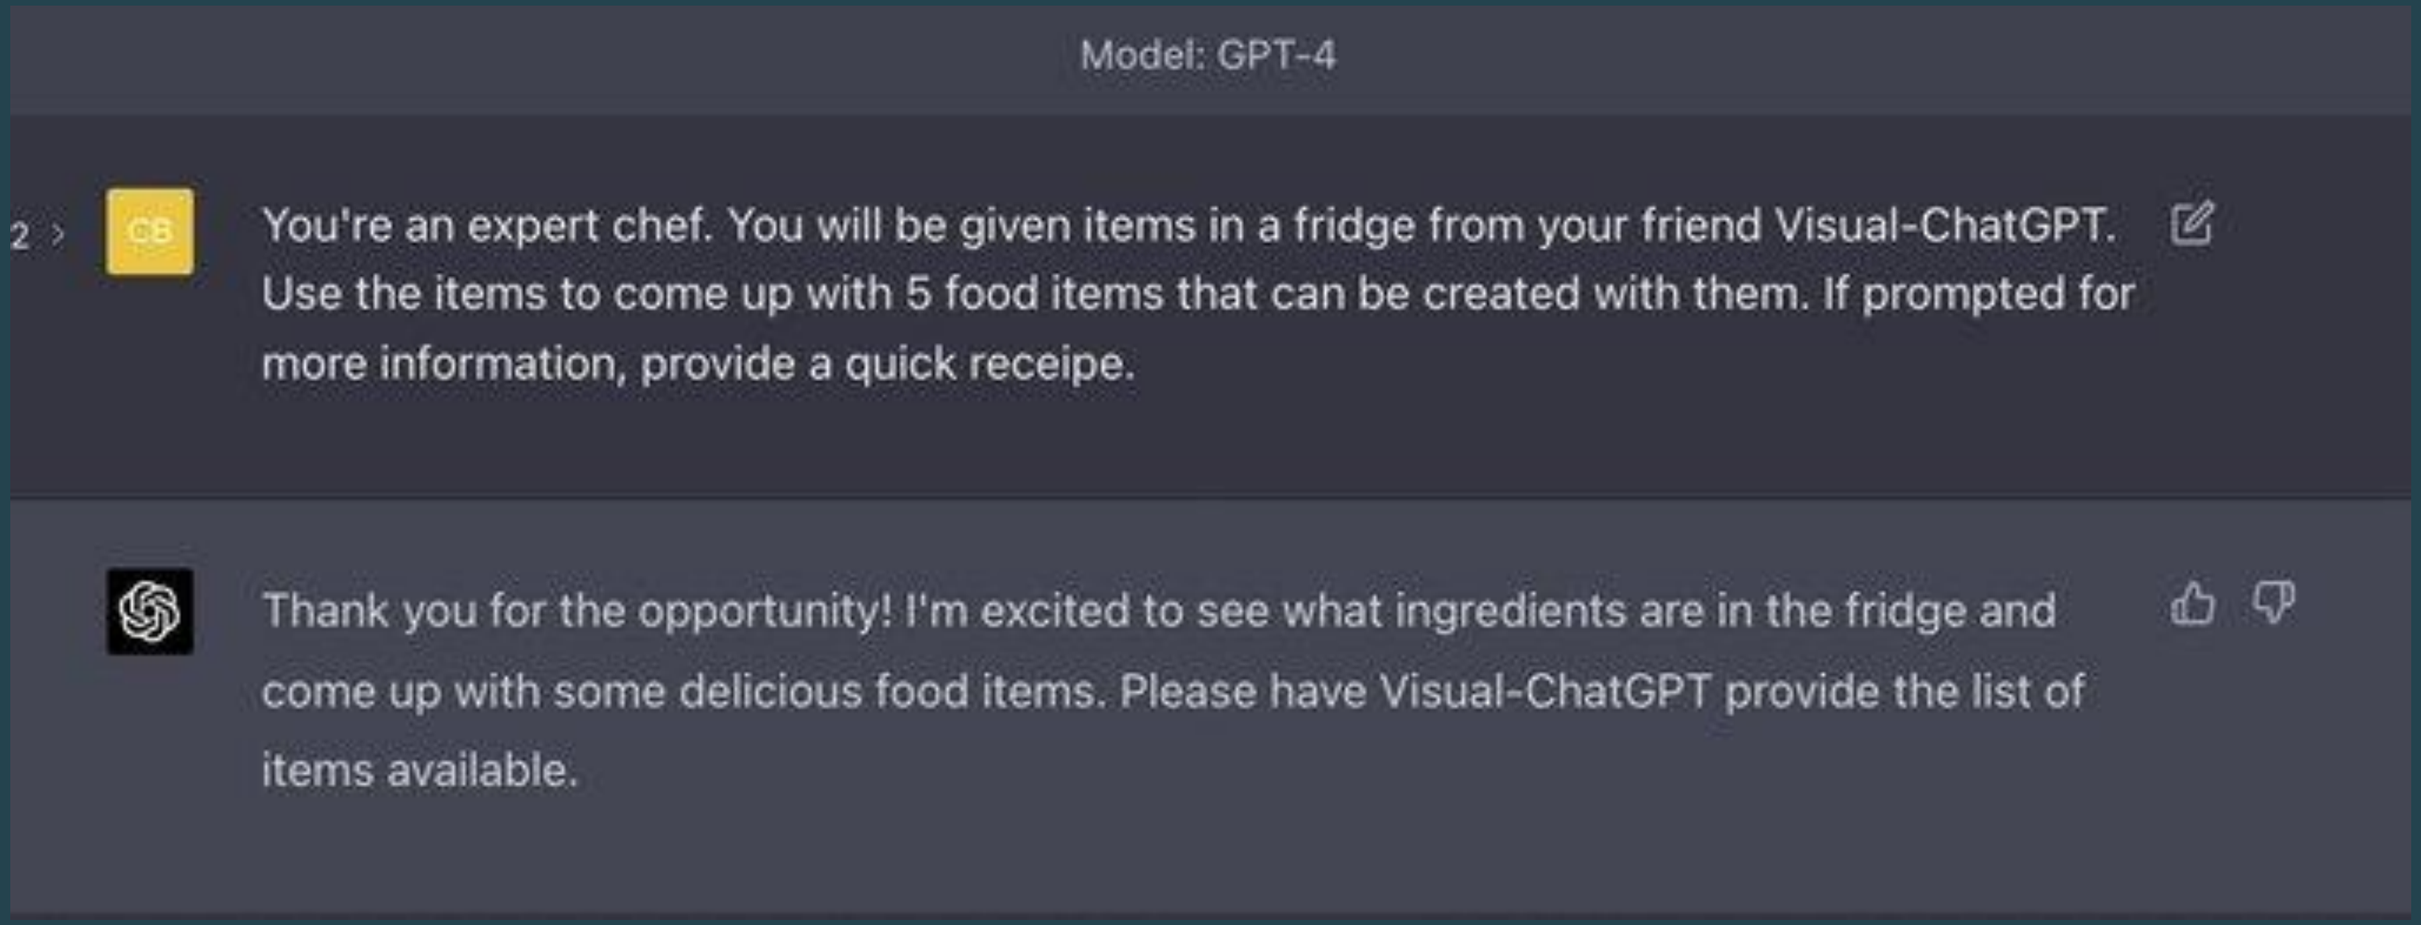


Just asking for a picture of some hard boiled eggs…



A refrigerator full of food.

The prompt:



Model: GPT-4
2 >
You're an expert chef. You will be given items in a fridge from your friend Visual-ChatGPT. Use the items to come up with 5 food items that can be created with them. If prompted for more information, provide a quick receipe.
Thank you for the opportunity! I'm excited to see what ingredients are in the fridge and come up with some delicious food items. Please have Visual-ChatGPT provide the list of items available.

Response 1:

‹ 4 / 4 ›

"The image you provided is a refrigerator with food items such as apples, oranges, bananas, eggs, a carton of milk, cheese, and a package of lunch meat and other items."

Based on the provided ingredients, here are five food items that can be created:

1. Fruit Salad:
   Combine diced apples, oranges, and bananas in a large bowl. Optionally, you can add a squeeze of lemon juice to prevent browning and a drizzle of honey for extra sweetness. Mix well and serve chilled.
2. Cheese Omelette:
   Beat 2-3 eggs in a bowl with a pinch of salt and pepper. Heat a non-stick pan with a little oil or butter, pour in the egg mixture, and cook until it begins to set. Add grated cheese on one side, fold the omelette over, and cook until the cheese melts. Serve with your choice of bread or toast.
3. Ham and Cheese Sandwich:
   Layer slices of lunch meat and cheese on a slice of bread. Add lettuce, tomato, or other desired toppings, then spread mustard or mayonnaise on another slice of bread and place it on top. Enjoy the sandwich as is or grill it for a warm, toasty meal.
4. Fruit Smoothie:
   Blend a mix of apples, oranges, and bananas with a cup of milk (adjust the amount to achieve desired consistency) until smooth. For added flavor, add a spoonful of honey or a few ice cubes for a cold, refreshing drink.
5. Cheese and Fruit Platter:
   Arrange slices of cheese alongside the apples, oranges, and bananas (cut into pieces) on a platter. This simple dish is perfect for snacking or as a light appetizer. Feel free to add crackers, nuts, or other accompaniments to enhance the experience.

These are just a few ideas, but you can get creative and mix and match ingredients to create even more dishes. Enjoy!

Response 2:

The image you provided is a refrigerator with food items such as apples, oranges, bananas, eggs, a carton of milk, cheese, and a package of lunch meat and other items.

Come up with food receipe ideas that are tasty yet unique, and the average human won't be able to think of this. Only use the ingredients in the prompt.

Using the ingredients provided, here are five unique and tasty recipe ideas:

1. Caramelized Banana and Cheese Toast:
   Slice bananas and cook them in a non-stick pan with a little butter over medium heat until caramelized. Place cooked banana slices on a slice of bread, top with grated cheese, and broil in the oven until the cheese melts. Serve as a sweet and savory snack or breakfast.
2. Sweet Orange Omelette:
   Beat 2-3 eggs in a bowl with a pinch of sugar, cinnamon, and a splash of milk. Heat a non-stick pan with a little butter, pour in the egg mixture, and cook until set. Add thinly sliced oranges to one side, fold the omelette over, and cook for a minute. Serve warm, garnished with powdered sugar and additional orange slices.
3. Apple and Lunch Meat Salad:
   Thinly slice apples and lunch meat, then toss them in a bowl with a dressing made from equal parts mayonnaise and plain yogurt, seasoned with salt, pepper, and a touch of honey. Chill for 30 minutes before serving for flavors to meld together. This unconventional salad offers a unique combination of textures and flavors.
4. Cheesy Banana Pancakes:
   In a bowl, mix 1 cup of milk, 1 beaten egg, and a mashed ripe banana. Add 1 cup of all-purpose flour, 1 teaspoon of baking powder, a pinch of salt, and a handful of grated cheese. Mix well. Cook spoonfuls of batter on a greased non-stick pan until bubbles form, then flip and cook the other side. Serve warm with a drizzle of honey.
5. Fruit Stuffed Grilled Cheese Sandwich:
   Layer thin slices of apple and orange with cheese on a slice of bread. Add a thin layer of cream cheese or butter on the outer sides of the bread to hold the sandwich together. Grill on a pan until both sides are golden and the cheese is melted, creating a unique fruity twist on a classic grilled cheese sandwich.

These recipes utilize the provided ingredients in innovative ways, offering new flavors and combinations that the average person might not think of. Enjoy experimenting with these unique ideas!

How AI Can Impact Healthcare

Improve Diagnostics

Advance Treatment

Boost Patient Engagement

Support Admin Tasks

Artificial intelligence (AI) is being used in the development of medicines and vaccines, including COVID-19 drugs and vaccines. Researchers are using machine learning-based models to discover new candidate drugs and vaccines in silico. AI is also being used to accelerate research, development, and clinical trials of COVID-19 vaccines.

In addition, AI is being used to create proteins that may be useful as vaccines, cancer treatments, or even tools for pulling carbon pollution out of the air. Properly designed AI has the potential to make the healthcare system more efficient and less expensive, fill the gaps in access to quality care in the world's poorest places, and serve as an unblinking watchdog on the lookout for medical errors.

"While **AI for imaging** will not come all at once, early **adopters of AI** in their practices will be ready to be **future leaders in health care**."

- Bibb Allen, MD, FACR, CMO of ACR Data Science Institute

Source: Radiology Today

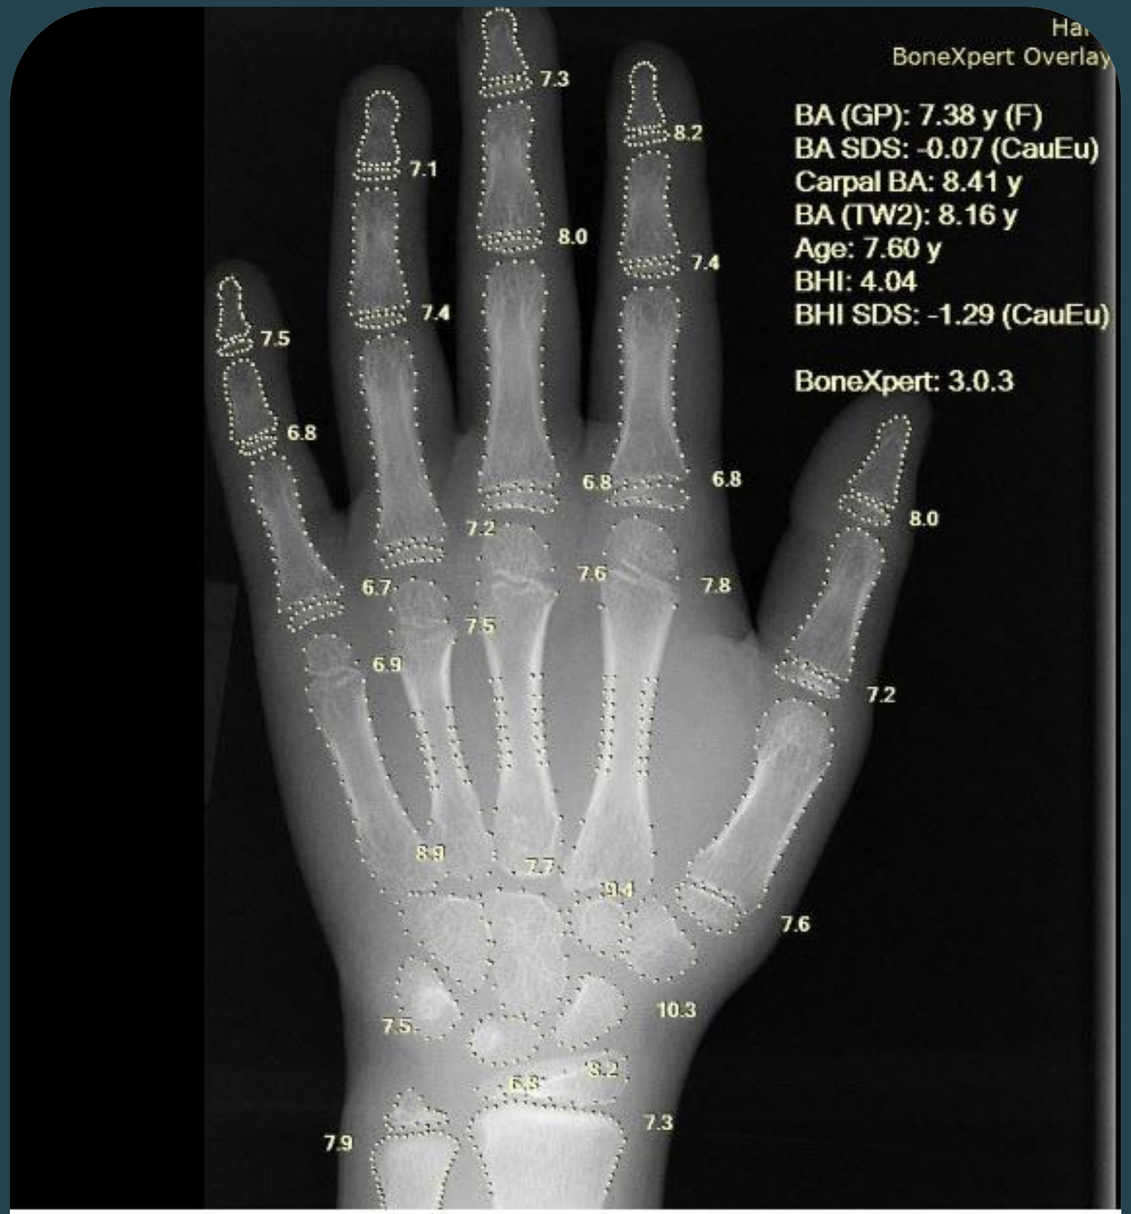
"AI has the potential to markedly improve productivity, efficiency, workflow, accuracy, and speed."

–Eric Topol, MD

"**AI will not replace radiologists**; instead those **radiologists who take advantage of AI** may ultimately **replace those who refuse to accept it.**"

Source: Clinical Imaging

In medical imaging, AI is being used to review thousands of images and detect diseases through Computerized Tomography (CT) and Magnetic Resonance (MR) Imaging. It may be particularly useful in settings where demand for human expertise exceeds supply, or where data is too complex to be efficiently interpreted by human readers.



Artificial intelligence (AI) is used in autonomous autos to improve vehicle safety, increase fuel efficiency, and provide drivers with enhanced connectivity features.

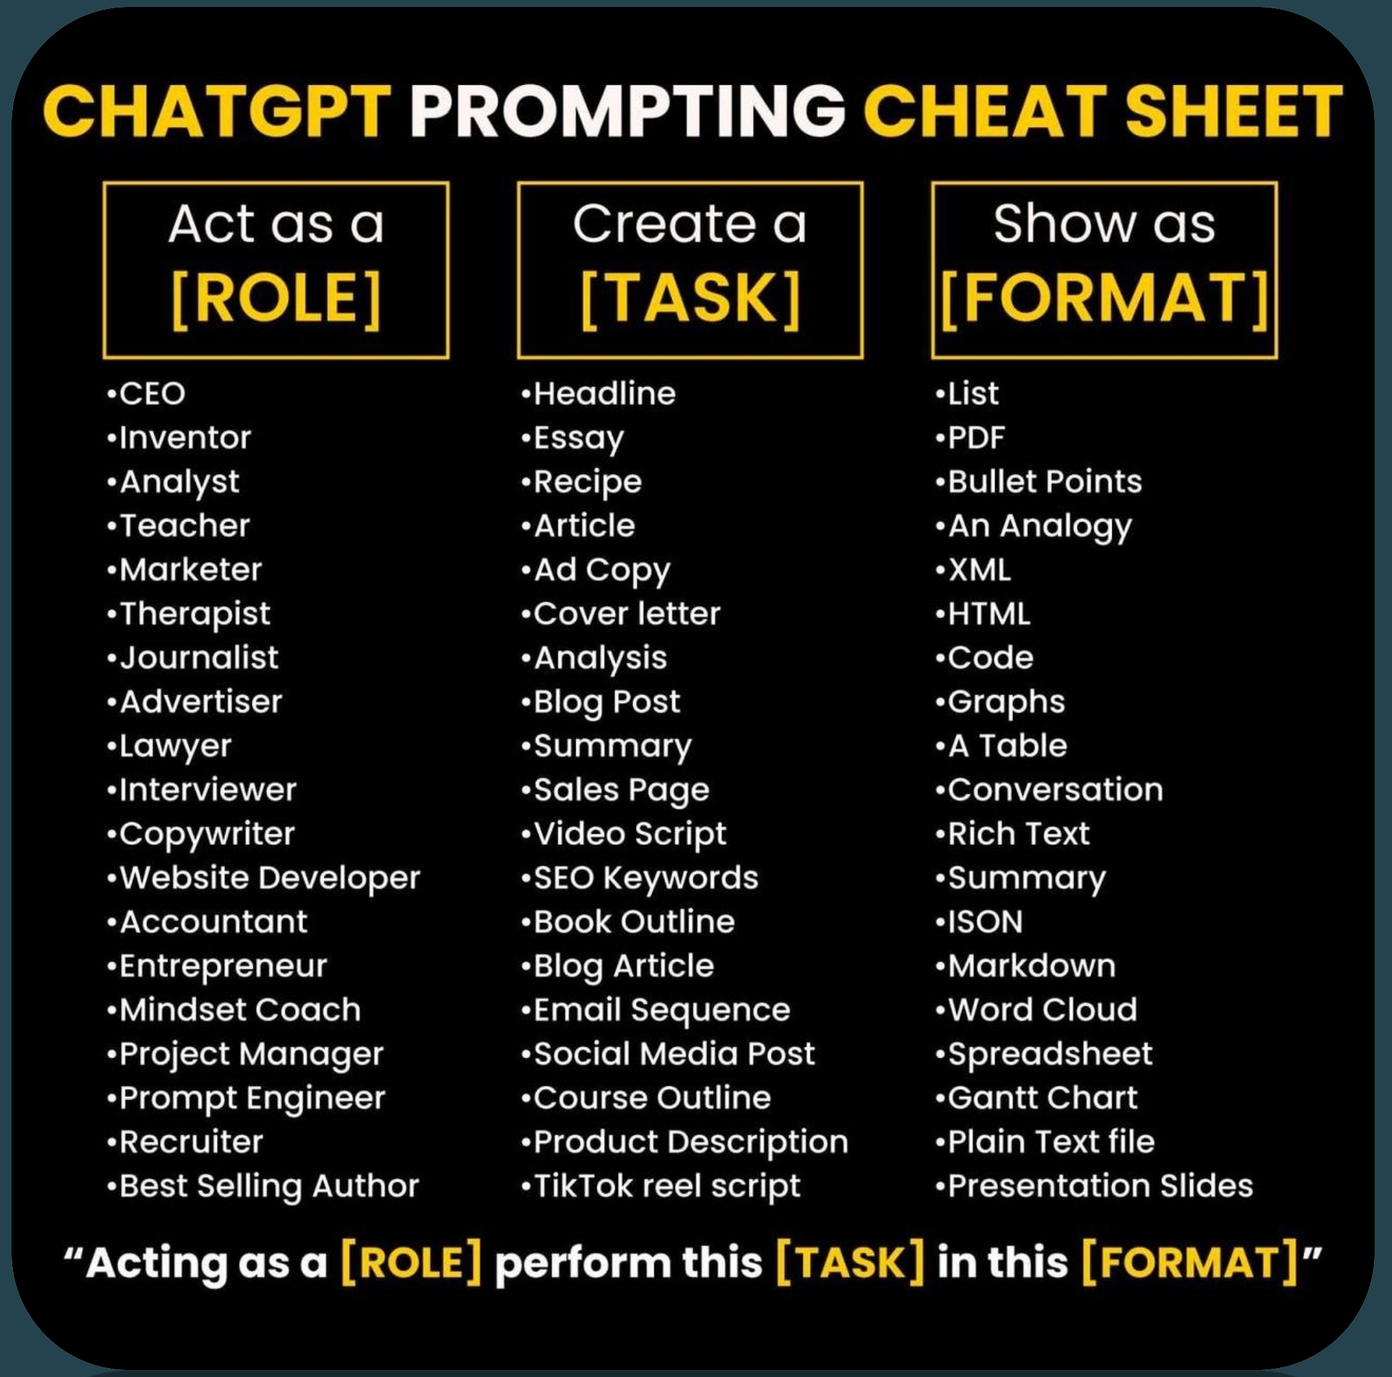
AI technologies power self-driving car systems, and developers of self-driving cars use vast amounts of data from image recognition systems, along with machine learning and neural networks, to build systems that can drive autonomously.

AI is used to simulate real-world conditions to safety-test autonomous vehicles, and Stanford researchers surveyed the algorithms and say they are good, but work remains.

Tesla produces electric cars equipped with Autopilot, the company's Advanced Driver Assistance System (ADAS) that enables automatic steering, accelerating, braking, lane changing, and parking.

Tesla's approach is called "imitation learning," and their algorithms learn from the decisions, reactions, and movements of millions of actual drivers around the world.

A Simple Prompt



What is Prompt Engineering?

Prompt engineering is a technique used in artificial intelligence to teach computers to understand and respond to human language. It involves crafting the right questions or instructions to guide AI models to produce desired outcomes. A well-crafted prompt can steer an AI model towards a specific output. It is used to train Large Language Models (LLMs), which are machines that can understand and generate human-like language.

Prompt engineering is enabled by in-context learning, which is a model's ability to temporarily learn from prompts. Being a good prompt engineer involves combining the disciplines of AI, programming, language, problem-solving, and even art to thrive on this career path.

A complex prompt – Dall-E 2
a bird in the hand::3 1980s::3 glowing::3 panorama::3 ultra wide angle lens::3 edgar degas::3 ceramic::3 --aspect 16:9

To add life to your image, you need to add various components to your prompts.

Action of the subject: This tells the AI what action is being taken. For example, a cat riding a bicycle.
Action execution technique: This tells the AI how the subject is performing the actions. For example, a cat riding a bicycle boldly.
The mood of the image: The mood can be described using adjectives to convey the atmosphere or emotion of the scene. For example, a happy cat riding a bicycle with confidence.
Background description: This provides context and setting for the image and can include details such as location, time of day, weather or any relevant elements. For example, **a cat riding a red bicycle with confidence in the rain along a peaceful road**

Linked Prompting

1 - Provide me with the ideal outline for an effective & persuasive blog post.
2 - Write a list of Engaging Headlines for this Blog post based on [Topic].
3 - Write a list of Subheadings & Hooks for this same blog post
4 - Write a list of Keywords for this Blog.
5 - Write a list of Compelling Call-to-Actions for the blog post
6 - Combine the best headline with the best Subheadings, Hooks, Keywords and Call-to-Action to write a blog post for [topic]
7 - Re-write this Blog Post in the [Style], [Tone], [Voice] and [Personality].

Effective Use of this Powerful Tool Can Propel Your Business To The Forefront Of This Modern Business Landscape.

Prompt Priming

ZERO - "Write me 5 Headlines about [Topic]"
SINGLE - "Write me 5 Headlines about [Topic]. Here is an example of one headline: 5 Ways to Lose Weight"
MULTIPLE - Write me 5 Headlines about [Topic]. Here is an example of some headlines: 5 Ways to Lose Weight, How to Lose More Fat in 4 Weeks, Say Goodbye to Stubborn Fat. Find a faster way to Lose Weight Fast"

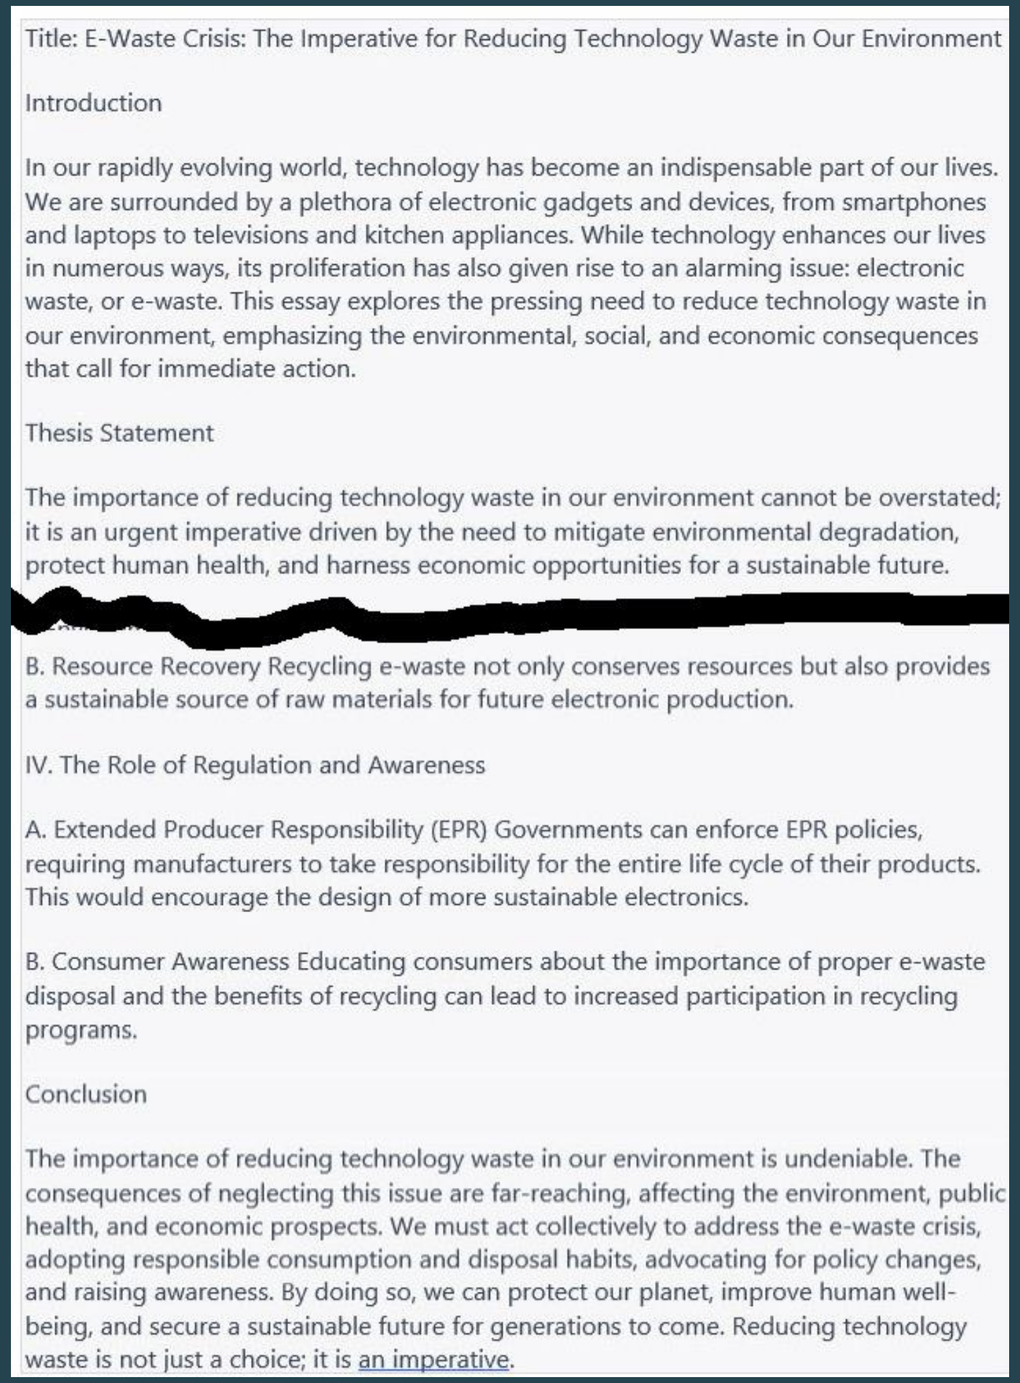
Prompts For Biz Owners

- Give me a list of inexpensive ideas on how to promote my business better?
- Acting as a Business Consultant, What is the best way to solve this problem of [Problem].
- Create a 30 Day Social Media Content Strategy based on [Topic 1] & [Topic 2].

By @shanefozard

Text Prompt

I want you to act as an essay writer. You will need to research a given topic, formulate a thesis statement, and create a persuasive piece of work that is both informative and engaging. My first suggestion request is “I need help writing a persuasive essay about the importance of reducing technology waste in our environment”.



Title: E-Waste Crisis: The Imperative for Reducing Technology Waste in Our Environment

Introduction

In our rapidly evolving world, technology has become an indispensable part of our lives. We are surrounded by a plethora of electronic gadgets and devices, from smartphones and laptops to televisions and kitchen appliances. While technology enhances our lives in numerous ways, its proliferation has also given rise to an alarming issue: electronic waste, or e-waste. This essay explores the pressing need to reduce technology waste in our environment, emphasizing the environmental, social, and economic consequences that call for immediate action.

Thesis Statement

The importance of reducing technology waste in our environment cannot be overstated; it is an urgent imperative driven by the need to mitigate environmental degradation, protect human health, and harness economic opportunities for a sustainable future.

B. Resource Recovery Recycling e-waste not only conserves resources but also provides a sustainable source of raw materials for future electronic production.

IV. The Role of Regulation and Awareness

A. Extended Producer Responsibility (EPR) Governments can enforce EPR policies, requiring manufacturers to take responsibility for the entire life cycle of their products. This would encourage the design of more sustainable electronics.

B. Consumer Awareness Educating consumers about the importance of proper e-waste disposal and the benefits of recycling can lead to increased participation in recycling programs.

Conclusion

The importance of reducing technology waste in our environment is undeniable. The consequences of neglecting this issue are far-reaching, affecting the environment, public health, and economic prospects. We must act collectively to address the e-waste crisis, adopting responsible consumption and disposal habits, advocating for policy changes, and raising awareness. By doing so, we can protect our planet, improve human well-being, and secure a sustainable future for generations to come. Reducing technology waste is not just a choice; it is an imperative.

The Sarasota Technology User Group Presentation meeting night is the first Wednesday of every month. This is a Zoom meeting. The night’s schedule is changing. The meeting will open with social time from 6:15 PM until 6:45. The “Help Desk” will answer your tech questions between 6:45 and 7:10. STUG announcements will then take place. The presentation of the month will be from 7:15 to 8:00 and followed by Q & A for the speaker and then the night’s wrap-up at 8:15. All times are Eastern Time.

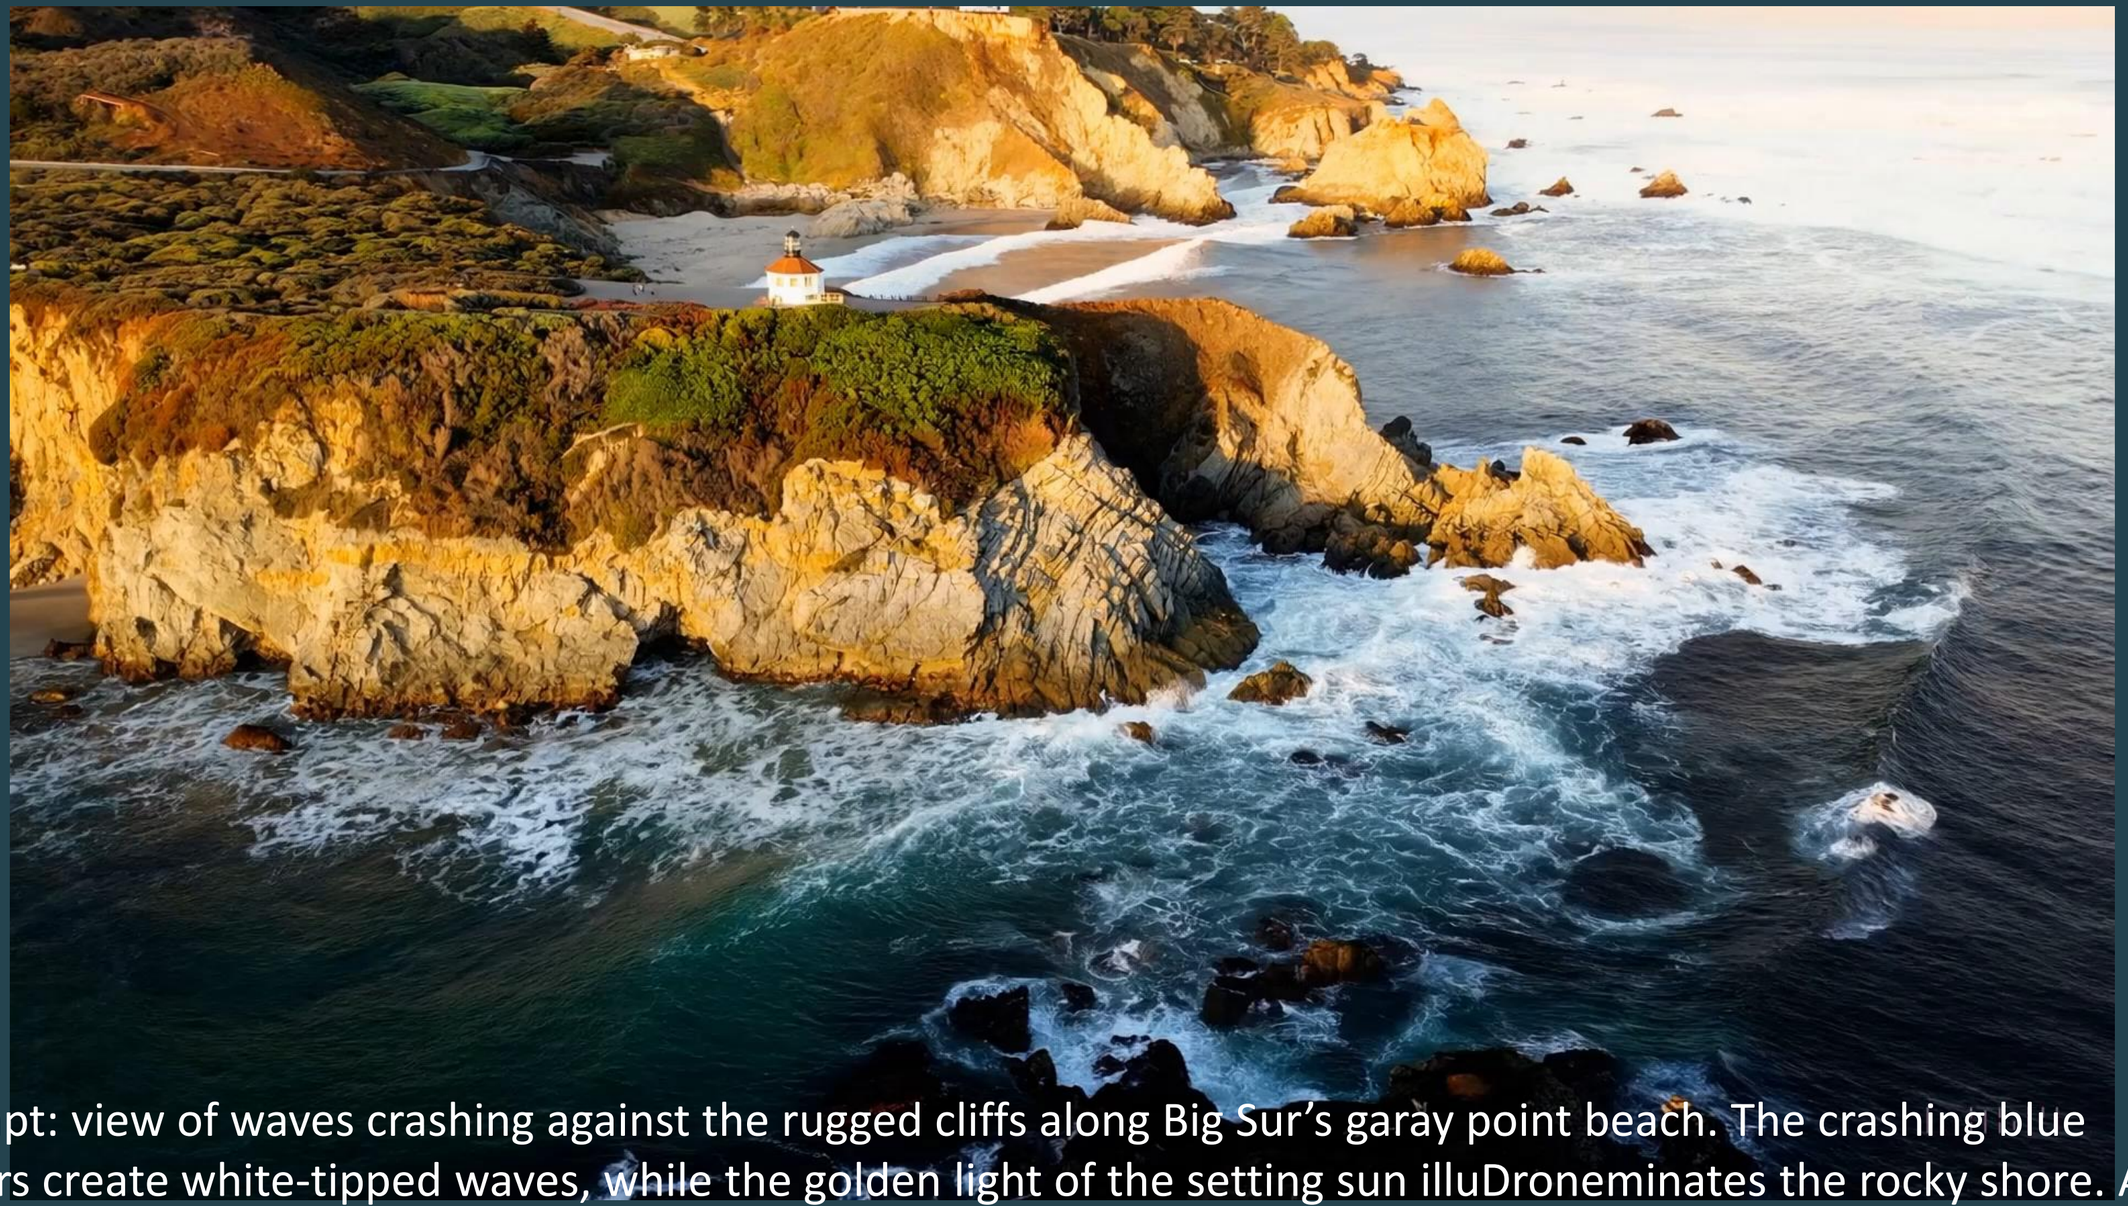
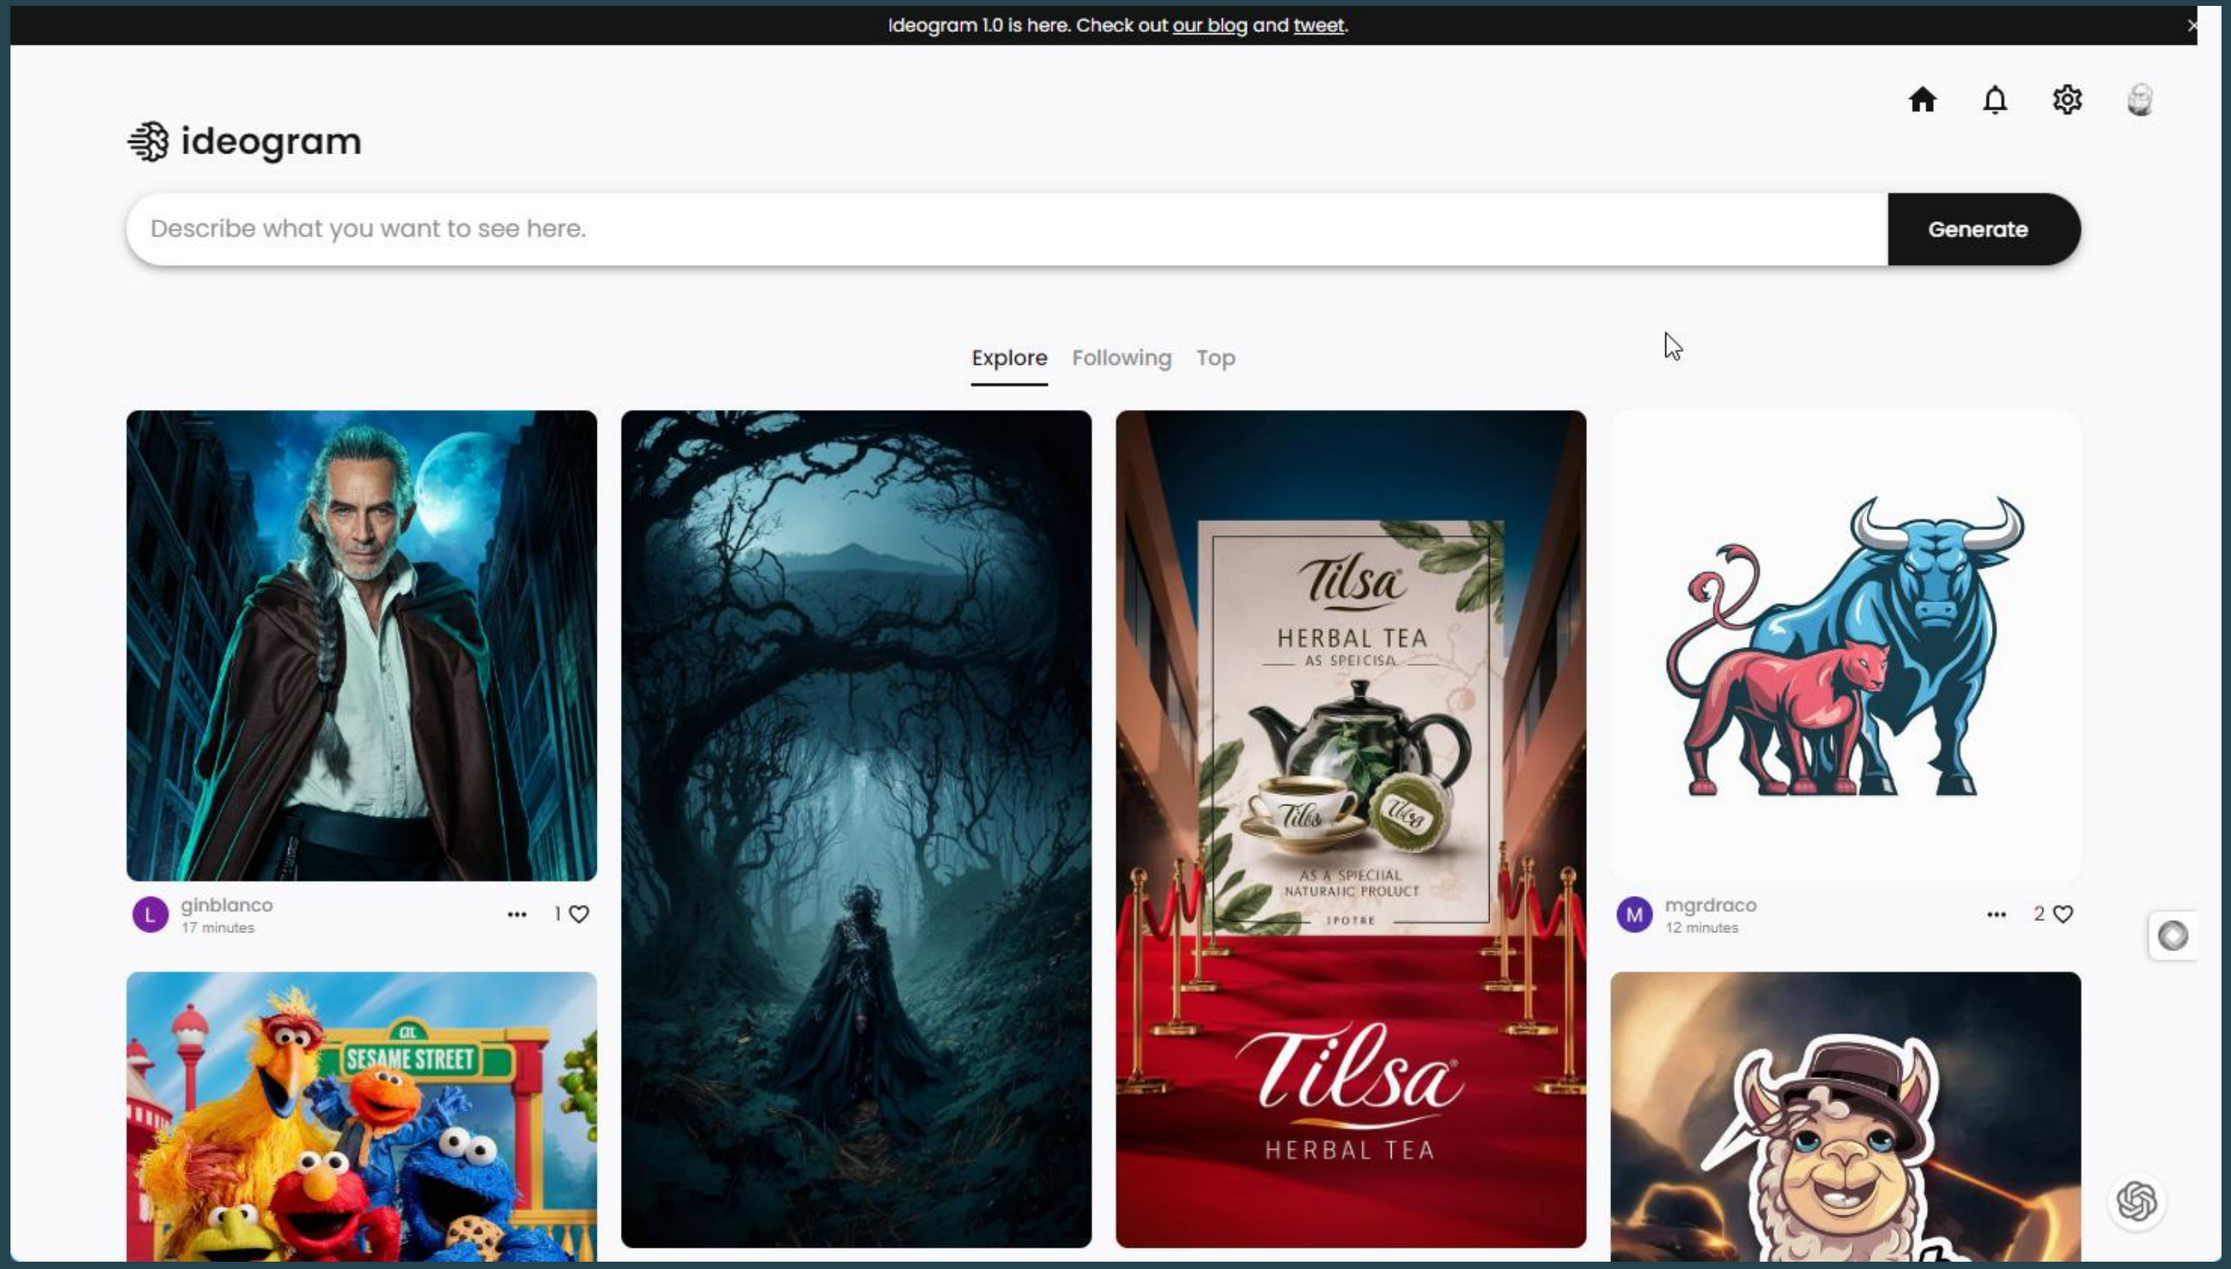
Prompt: Historical footage of California during the gold rush.



Prompt: view of waves crashing against the rugged cliffs along Big Sur’s garay point beach. The crashing blue waters create white-tipped waves, while the golden light of the setting sun illuDroneminates the rocky shore. A small island with a lighthouse sits in the distance, and green shrubbery covers the cliff’s edge. The steep drop from the road down to the beach is a dramatic feat, with the cliff’s edges jutting out over the sea. This is a view that captures the raw beauty of the coast and the rugged landscape of the Pacific Coast Highway.



https://ideogram.ai/t/explore

Prompt

a quaint tavern on a busy street. The tavern is called "Hewie's Place"

Magic Prompt

A charming, bustling street scene featuring a quaint tavern named "Hewie's Place." The cozy, inviting establishment is adorned with colorful lanterns and a sign that beckons patrons to enjoy food and drink. The background reveals a lively, cobblestone-paved street filled with a mix of townspeople, merchants, and travelers. The ambiance of the scene is warm and welcoming, with a hint of adventure and mystery in the air.

Prompt

a group of seniors holding signs that say “CCS" in caps, photo

Magic Prompt

A heartwarming photograph of a group of elderly seniors standing together, proudly holding signs that spell out “CCS" in capital letters. They are dressed in casual attire and have big smiles on their faces. The background is a sunny outdoor space, with lush green trees and a clear blue sky., photo

Here are some common issues and concerns that people have with AI:

- **Unemployment** - There is concern that as AI systems become more capable, they may displace human workers in certain jobs and industries. This could disrupt economies and leave many people unemployed.

- **Bias** - AI systems can pick up biases from their training data. This can lead to issues like racial, gender, or other discrimination. Ensuring AI is fair and unbiased is an ongoing challenge.

- **Accountability** - When AI systems make mistakes or cause harm, determining who is responsible can be difficult. How do we ensure there is transparency and accountability?

- **Autonomy** - As AI becomes more advanced, there are concerns about it operating independently without human oversight and control. Could AI become too autonomous?

- **Existential threat** - In the long run, some worry advanced AI could become uncontrollable and threaten humanity if precautions are not taken. There are concerns about an existential safety risk from artificial superintelligence.

- **Privacy** - Large AI systems are often data-hungry. Collecting the data required to train advanced AI can raise privacy issues. Data security is also a concern with AI systems.

- **Ethical issues** - The complexity of AI raises many ethical questions about things like inherent biases, transparency, accountability and more. Developing ethical AI is an ongoing challenge.

- **Lack of trust** - If the public does not trust or understand AI, they may resist its adoption. More work needs to be done to build trust and acceptance of AI technology.

Common issues range from socioeconomic concerns to technical challenges to existential threats. Advancing AI responsibly and addressing these issues is critical.

Here is a summary of the key points from the fact sheet:
President Biden Issues Executive Order on Safe, Secure, and Trustworthy Artificial Intelligence
October 30, 2023

From a fact sheet from the Presidential Briefing Room
and summarized by Claude AI

- President Biden issued an executive order to set new standards and rules for developing artificial intelligence (AI) technology responsibly. This will help ensure AI is safe, secure, and trustworthy.

- The order requires companies making advanced AI systems to share test results with the government, so any risks or issues can be identified before the systems are made public. Standards will be developed for testing AI safety.

- The order aims to protect people's privacy when using AI, especially for kids. It calls on Congress to pass data privacy laws. Agencies will be required to evaluate how they collect data to train AI systems.

- The order seeks to prevent AI from discriminating or worsening existing biases. Guidance will be provided to agencies and contractors to avoid algorithmic discrimination.

- It looks to protect consumers from harm by establishing oversight and reporting of unsafe AI healthcare practices. Resources will help educators deploy AI tools properly in schools.

- The order calls for developing best practices to protect workers from job displacement, unfair hiring practices, or workplace surveillance from AI. Study of AI's labor impacts will inform support for affected workers.

- It promotes innovation by providing access to AI resources and data for researchers and small businesses. Visa programs will be updated to enable skilled AI experts to work in the U.S.

- International collaboration will be expanded to advance safe and responsible AI worldwide. AI standards will be developed with global partners.

- Government use of AI will be made more responsible through new guidance, faster procurement, hiring of experts, and employee training.

In summary, the order establishes guardrails, standards and protections to ensure AI is developed and used in a responsible way that benefits society.

AI Gone Wrong

Let’s Talk AI (Artificial Intelligence)

Friday August 23rd 1:00 pm – 2:00 pm ET

Moderated by Hewie Poplock

This discussion group for beginners and intermediate users of AI focuses on practical applications of AI-powered tools. Attendees share their experiences to gain a better understanding of how to leverage these tools in their work and personal lives. Discussions cover topics such as chatbots and image to graphics helping each other stay up-to-date with the latest developments in the field. Overall, this group provides a welcoming environment for individuals to network and explore the exciting world of AI.
